Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Results of the Third Joint Us-USSR Bering Chukchi Seas Expedition (Berpac): Summer 1988 In the last few years, an ever-growing anthropogenic impact on different natural ecosystems and the adverse effects resulting from this impact have led humanity to realize the real threat of potential global ecological disasters and to give a high priority to environmental protection. Natural factors cause the bulk of nearly all man-made chemicals to eventually enter the World Ocean, which, owing to this, can be considered a tremendous reservoir/accumulator of contaminants. Elimination of these contaminants through natural processes of the ocean (i. e. self-purification) occurs through a complex system of physical, chemical, and biological processes taking place in the ocean. However, conditions favorable for the existence of certain hydrobionts that were established over whole geological epochs are being disturbed by these anthropogenic impacts. For these reasons, it is obvious that while studying ocean pollution and its ecological consequences, it becomes necessary to have complex physical, chemical, and biological investigations, which calls for principally new, interdisciplinary approaches to the solution of this problem. The protection of the marine environment against the undesirable influence of anthropogenic factors are global problems common to all mankind. They can, and must, be solved by joint efforts of scientists from different countries. For this reason, and taking into consideration that the Bering and Chukchi Seas wash the US and USSR coasts (countries equally interested in the further fate of these unique regions of the World Ocean), it was considered appropriate that the efforts and knowledge of scientists of both countries be joined to study the state of the ecosystems of these seas. It is important to note that...
